Summary

Final-year CSE(AI) undergraduate at Amrita Vishwa Vidyapeetham who builds and ships production AI systems — autonomous agents, LLM-powered backends, and data pipeline infrastructure.

Education

Amrita Vishwa Vidyapeetham *Coimbatore, India*
B.Tech in Computer Science & Engineering (AI) — CGPA: 8.26 2023 – Present
Sri Chaitanya Techno School *India*
Class XII: 91% — *Class X: 98.2%* 2023

Experience

MuxGrow *Remote*
Software Engineer Intern Apr 2026 – Jun 2026

- Built an **agentic AI playground** with DB-persisted session history, slash-command skill system, per-response attribution, and usage telemetry.
- Rebuilt transactional email system with **Amazon SES**, Handlebars templates, event-driven delivery, payload validation, retry handling, and idempotency guards.
- Shipped workspace **email campaign module** with SES v2, sender identity management, template versioning, and analytics pipeline.
- Extended DM automation pipeline with **plan-aware Free tier enforcement**, idempotency, overflow handling, and structured telemetry.

TechZeeb *Remote*
Software Developer Intern Jun 2025 – Aug 2025

- Built and shipped the **‘Kovai Natural Farmers’** platform end-to-end, from database schema design to production deployment.
- Cut API response latency by 40%** by refactoring server-side JavaScript and rewriting slow **MySQL queries** with indexed lookups and query optimization.
- Grew mobile engagement by 30%** by rebuilding the UI as a fully responsive, cross-platform experience.

Technical Skills

Languages: Python, C++, JavaScript
AI/ML: ML, DL, PyTorch, TensorFlow, HuggingFace Transformers, RAG, LLM fine-tuning, NLP, Computer Vision, Pandas, NumPy, LangChain
Backend & Web: FastAPI, Flask, Express.js, Next.js, React
Databases: PostgreSQL, MySQL, MongoDB, Pinecone (vector), Supabase
Infrastructure: Apache Kafka, Docker, Kubernetes, AWS, Azure, CI/CD, Git

Projects

Anomyst — Data Pipeline Health Monitoring [\[GitHub\]](#)
Python, FastAPI, Next.js, PostgreSQL, Groq Llama 3.3, SciPy

- Designed a full-stack anomaly detection platform using **Z-score drift** and **KS-tests** to identify data quality and distribution anomalies across pipeline runs.
- Integrated **Groq Llama 3.3** to convert statistical anomalies into human-readable root-cause narratives, enabling rapid interpretation of large-scale pipeline failures.

Thala — Intelligent Incident Management System [\[GitHub\]](#)
AWS Bedrock (Llama 3.3), Kafka, Elasticsearch, Flask, AWS Textract

- Built an autonomous incident agent processing **Slack/Jira** tickets via async **Kafka** pipelines with real-time severity classification using **Llama 3.3**.
- Integrated **Elasticsearch** for semantic resolution retrieval and **AWS Textract** for OCR on image attachments, enabling auto-resolution using historical context.

Agentic Code Studio — Autonomous Software Engineering Platform [\[GitHub\]](#)
Python, LangGraph, Google Gemini, FastAPI, Next.js

- Built a **multi-agent system** (Developer, Critic, Tester, Security Expert) on an **Actor-Critic architecture** using **LangGraph** to iteratively fix bugs, optimize code, and audit security vulnerabilities.
- Orchestrated a **directed cyclic graph** of specialized workflows that verify fixes via **automated unit test generation** and static analysis across Python, C++, and Java.

Achievements & Hackathons

• **Finalist**, InnovateFinlit 2026 • **Runner Up**, SuperHack 2025. • **Top 20%**, Build With India 2025.
